Women leading on all fronts to save the ocean

Description of the project

Located in Jangamo Bay, Mozambique, Love-The-Oceans protects endangered marine life with a community-based, holistic approach involving research, education and campaigning, professional skill-building for local jobs and sustainable entrepreneurship. They have increased young women's ocean literacy and technical skills, training

the first 5 female swim teachers and lifeguards, certifying the first female scuba divers in the district, and developing innovative women-led mussels aquaculture projects. Their unique initiative focuses on scalable self-sufficiency, ensuring women's economic autonomy, fostering long-term climate resilience and generational change.

Transformative Results

Ocean and coastal ecosystems conservation is crucial for climate mitigation.

Leverages traditional low-input activities and the sustainable use of local resources.

Promotes self-sustaining, ecologically sound mussel aquaculture.

Increasing women's literacy in ocean science and monitoring activities.

Developing female skills and local jobs in the male-dominated swimming and diving sector.

Fostering women's economic independence via local sustainable enterprises.

Locally-driven initiative with strong community engagement for long term impact.

Supported by academic research and university networks for successful conservation strategies.

Open-source documented methodology and results to share with other coastal protection initiatives.
